USER PERSONA

CampusBite | College Canteen Ordering App

Priya Natarajan

College Student

Age: 20 years

Location: Chennai, Tamil Nadu

Primary device: Smartphone

Profile: Budget-conscious student

About

Priya is a busy college student who wants to order food from the campus canteen during short breaks. She prefers a simple, reliable mobile experience that helps her choose food, pay quickly, and collect her order on time.

> *“I want to order my food in a few taps and collect it without waiting in a queue.”*

Goals

- Order food quickly
- Check menu, prices, and availability
- Pay digitally and collect on time
- Know when the order is ready

Pain Points

- Long queues during breaks
- Unclear item availability
- Slow ordering or payment
- Uncertain waiting time

Needs & Behaviours

Priya uses her smartphone regularly, prefers familiar app layouts, and makes quick decisions. She needs a clear menu with current availability, a short checkout flow, UPI or other convenient payment options, and an order status with an estimated collection time.

Design Opportunity

Design a straightforward ordering flow that reduces waiting, shows accurate menu information, makes payment simple, and clearly communicates when food is ready for collection.

Note: This is a sample persona. Validate the assumptions through user interviews or usability research.
